

2010 ORGANIC PRODUCERS' CONFERENCE

- promoting organic principles,
best practice and policies

The Organic Research Centre's annual producer conference will be taking place once again in January 2010 at Harper Adams and we are developing a full and exciting programme (see over for outline).

This year, the conference has been extended to two full days with more workshops and contributions. This will allow us to explore the full range of issues and challenges which organic producers need to grapple with in developing their systems. As well as workshops organised by ORC, there are also workshops organised by IOTA, OGA and other groups.

We also want to look more closely at how organic farming can contribute to issues of importance to society such as climate change, food security and biodiversity conservation, and how we can improve the communication of these aspects to consumers, citizens, policy makers and other producers.

Call for papers still open

While we have arranged the outline programme, we are still open to suggestions for presentations suitable to the session themes. Proposals for papers with titles and short summaries (200 words) should be sent as soon as possible, but at the very latest by 31st October (postal strikes permitting!), to:

Dr Nic Lampkin, The Organic Research Centre - Elm Farm,
Hamstead Marshall, Newbury, Berkshire RG20 0HR
Email: organicinform@organicresearchcentre.com

We aim to publish the full programme with speaker details by mid November.

Registration

Registration forms are now available on-line at:

www.organicresearchcentre.com and www.organicinform.org
or call 01488 658279/e-mail organicinform@organicresearchcentre.com

Early bird discounts apply to paid up registrations received by 27th November 2009 and further discounts are available for producers (with holding numbers), IOTA members and students.
